

High on emotion

CLEARAUDIO'S EMOTION SE PACKAGE INCLUDES ARM AND HIGH OUTPUT CARTRIDGE

Employing Clearaudio's patented ceramic magnetic bearing, a new 20mm-thick acrylic chassis with height adjustable feet and a 28mm-thick platter, the Emotion SE is Clearaudio's total reworking of its original Emotion model.

It comes complete with the German company's Satisfy Carbon Directwire tonearm and Aurum Beta-S Wood

high output moving-magnet cartridge, the £1790 Emotion SE having been designed to be a plug 'n' play record player with a high-end performance.

Clearaudio's magnetic bearing is designed to eliminate friction, wear and noise as it avoids any point of load, its shaft machined from a ceramic alloy. The deck employs a separate synchronous motor

unit in an aluminium housing and a 'joint-less' silicone-based drive belt. The accompanying Satisfy arm features a woven carbon fibre arm tube and magnetic bias compensation.
